DESCRIPTORS	*High Achievement; High Schools; High School Seniors; *High School Students; *Leaders; National Surveys; *Student Attitudes

ABSTRACT

This study surveyed high school students (N=1,879) who were student leaders or high achievers in the spring of 1991 for the purpose of determining their attitudes. Students were members of the junior or senior high school class during the 1990-91 academic year and were selected for recognition by their principals or guidance counselors, other faculty members, national youth organizations, or the publishing company because of their high achievement in academics, activities, community service, athletics, or their performance in national scholarship or award contests. Statistical results from the study are presented in these areas: demographics; education; employment/spending money; college plans; careers and lifestyles; global economy; environment/politics; hero/heroine for 90s/Persian Gulf War/Armed Forces; suicide; dating/marriage; Acquired Immune Deficiency Syndrome; sexual issues; abortion; drugs/alcohol/tobacco; date rape; death penalty; and gun control. Introduction

This survey was conducted by "Who's Who Among American High School Students®," Lake Forest, Illinois, during the spring of 1991 for the purpose of determining the attitudes of student leaders in our nation's high schools. It is the largest independent sampling of this segment of the student population taken annually and this year marks its 22nd anniversary. "Who's Who" believes that, in these rapidly changing times, it is important for the nation to be aware of students' opinions and attitudes. Today's teens are not only an important segment of the present voting population, but will be assuming positions of leadership as this country enters the 21st century. Hopefully, as the data from this 22nd national survey is circulated and studied, significant trends will be uncovered.

We regard this survey as an educational experiment. We are in no way attempting to promote or negate any political, moral or social philosophy, organization, firm or individual. Because of our contact with student leaders, we believe we are in a position to gather important facts and meaningful information and, therefore, have a corporate responsibility to conduct this survey.

This year's questionnaire is a composite of questions asked over the past 21 years. Prior to this survey, the questionnaire was developed with the help of a 25 student Advisory Board and educators across the country.

Although we of "Who's Who" feel that some of the questions and answers are of a private and controversial nature, we do not hesitate to take the responsibility for the project in order to achieve our objective of identifying and measuring students' attitudes. We apologize to anyone offended by any of the material presented herein.

Though by no means a reflection of today's "average" student because it is dealing with the opinions of student leaders and high achievers, we feel this survey does give insights into the thoughts of those leaders who set standards and behavior patterns for others to follow.

Of the nearly 700,000 high achievers featured in the 1991 edition of "Who's Who Among American High School Students," 5,000 students were sent the survey and 1,879 completed questionnaires were returned.

These 1,879 responses form the base of the survey. All students surveyed were members of the junior or senior class during the 1990-91 academic year. They were selected for recognition in "Who's Who" by their principals or guidance counselors, other faculty members, national youth organizations or the publishing company because of their high achievement in academics, activities, community service, athletics or their performance in national scholarship or award contests.

The students listed in the 25th Annual Edition of "Who's Who" represent just over 5 percent of the 12,000,000 students who were in high school during the 1990-91 academic year. They represent 18,000 of the 22,000 public, private and parochial high schools in the nation.

This survey was tabulated by computer. Questions were tabulated by total response; breakdowns by sex, race, type of school attended and type of community are also included. On questions calling for write-in answers, results are shown of the most frequently mentioned answers.
